

Secondaries Case / Pigouvian Tax Derivation

Session 30 • Track 1: Secondary market case • Track 2: $\tau^*(L)$ optimality proof

Samir Asaf, PhD, CFA, CMA, CTP, CM&AA

Senior Partner, Regent Financial LLC, New York

Former Finance Instructor, Stanford University

Primary Text: Liquidity Illusion (Forthcoming, 2026)

Graduate Finance Course • Spring 2027 • Session 30 of 32

Session 30: split-track agenda

TRACK 1 (Practitioner)

Secondary market case workshop

- ▶ Case: Coller Capital secondary fund acquisition
- ▶ Use GE-LAV to bid on a secondary portfolio
- ▶ Compute MOIC under three regime scenarios
- ▶ Group exercise: secondaries as 'natural hedge'
- ▶ Deliverable: 2-page IC memo

TRACK 2 (Researcher)

Pigouvian tax optimality

- ▶ Optimality conditions for state-contingent tax
- ▶ Convex optimization formulation
- ▶ Derivation of $\tau^*(L)$ = marginal external cost
- ▶ Sensitivity to MFG calibration
- ▶ Problem: verify $\tau^*(0) = 0$ from first principles

Session 30 summary

What we accomplished today

- 1 Session 30 runs split-track: practitioners and researchers work on different deliverables
- 2 Track 1: case-based, applied analysis with deliverable IC memo
- 3 Track 2: theoretical, with deliverable problem set or proof
- 4 Both tracks reconvene in Session 32 for final project presentations

Next session

Session 31: continued split-track or capstone
